A

MOI LOGO

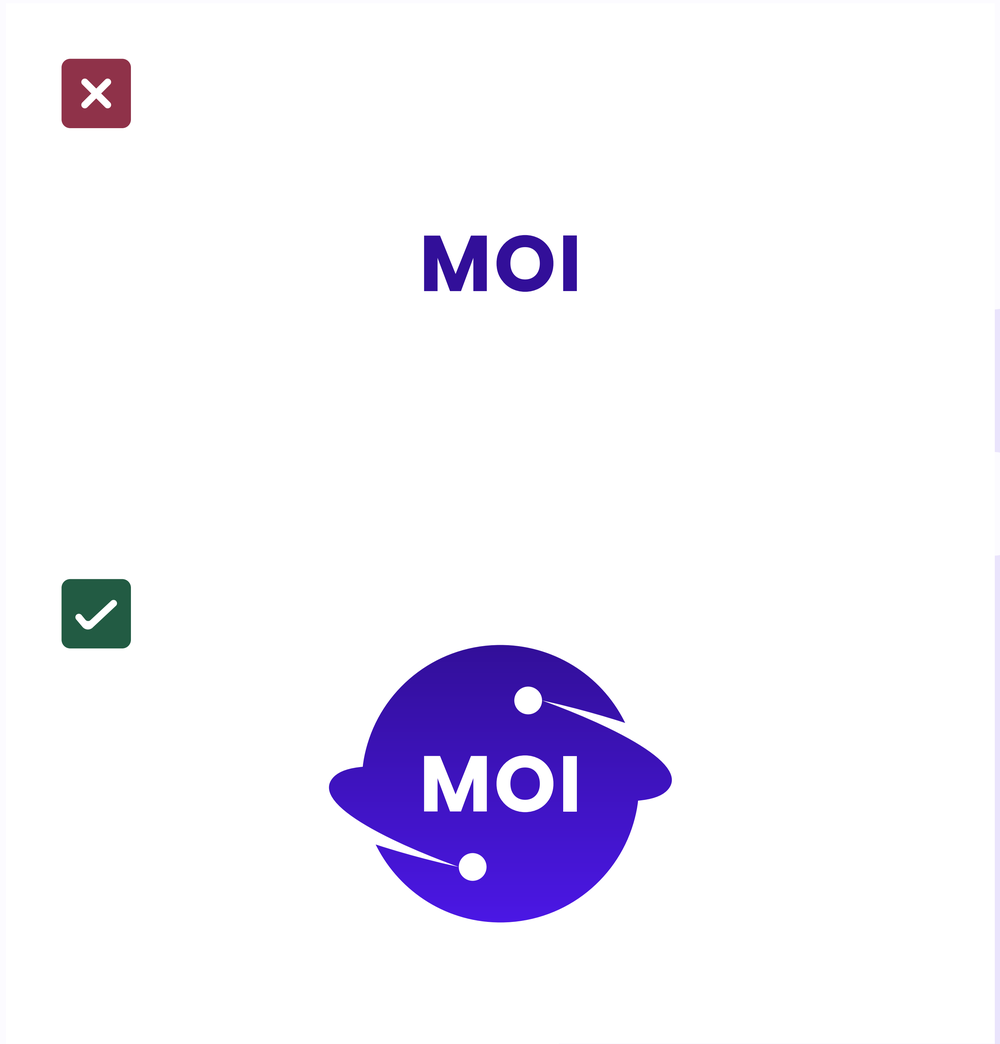

LOGO

1. The MOI logo consists of the MOI shape and the letters MOI inside it.
2. The logo exists in two versions, one for use against light backgrounds and another for use against dark backgrounds.
3. It is drawn at 24x20px in its smallest size. It is recommended that it be scaled in whole number ratios for crisp reproduction on screens (eg 72x60 px or 120x100 px).
4. The logo can be scaled discretionarily for print purposes as long as the proportions are maintained.
5. The logo can be found in JPEG, PNG, SVG and Ai formats here: Logo Files

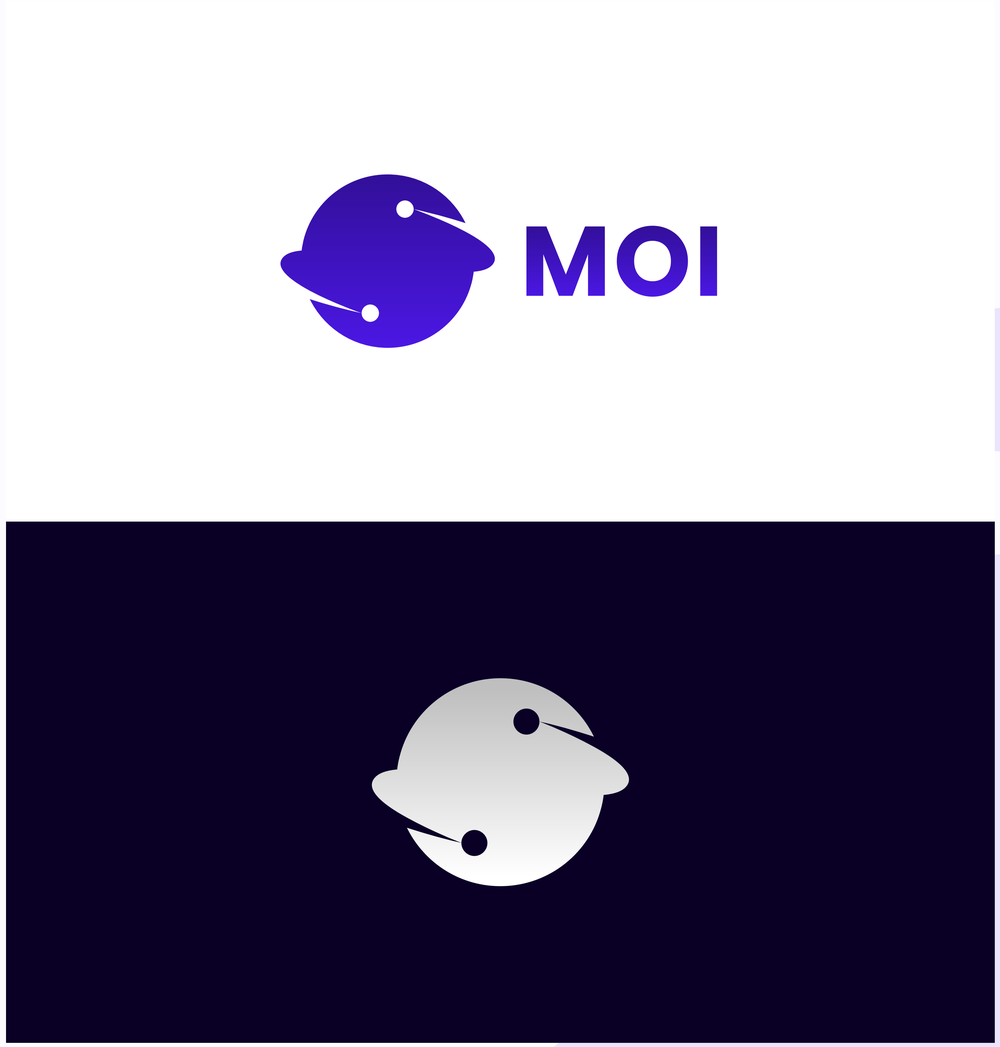

WORDMARK

The MOI wordmark is never used by itself. The logo and wordmark should always be used together whenever possible. In rare cases, applying the tiny version of the logo + word mark may be necessary as shown on page A3 of this document.

TINY LOGO

1. For small print or mobile screens, the logo may need to be reduced to a tiny size where the logo doesn't have MOI written in the centre, instead the wordmark MOI is placed alongside the planetoid shape.
2. We have two versions of the Tiny Logo, one for use against light backgrounds and another for dark backgrounds.
3. The logo is 10x10 px in its smallest size, and we recommend scaling it in whole number ratios for a clear reproduction on screens, such as 30x30 px or 50x50 px.
4. Favicons are created using only the planetoid shape of the logo without the wordmark, making them a special case of the Tiny Logo.

DOS AND DON'TS

For small screen applications (mobile)

For all other screen applications

For large prints

Use the dark version of the logo for low-light backgrounds

Use the light version of the logo for light coloured backgrounds

It is okay to sometimes use a black & white logo for reduced contrast.

Do Not Rotate

Do Not Warp

Do not change Typeface in word-mark

Ensure that logo is properly visible

Do not use effects such as shadows, embossing or engraving

Ensure proper spacing around the logo with relation to other graphics/logos

Do not use the wordmark by itself

Do not switch the placement of the logo and the wordmark

Do not change spacing between the logo and the wordmark

Do not change the colours, gradient or direction of gradients in the logo

Do add any other visual effects or switch the colour schemes.

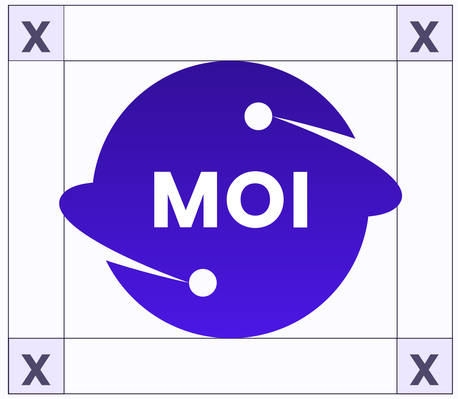

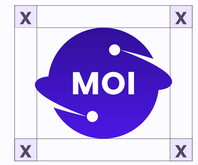

Do not use outline logos or create any additional strokes around logo

SPACING GUIDELINES

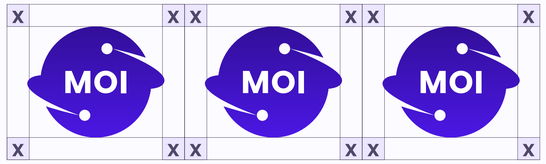

Proper spacing around the logo is crucial to avoid overcrowding and draw attention to the graphic you want to emphasise.

Our logo files in the brand library come with a default minimum padding applied to the image, which must be respected when tiling the logo with other elements.

B

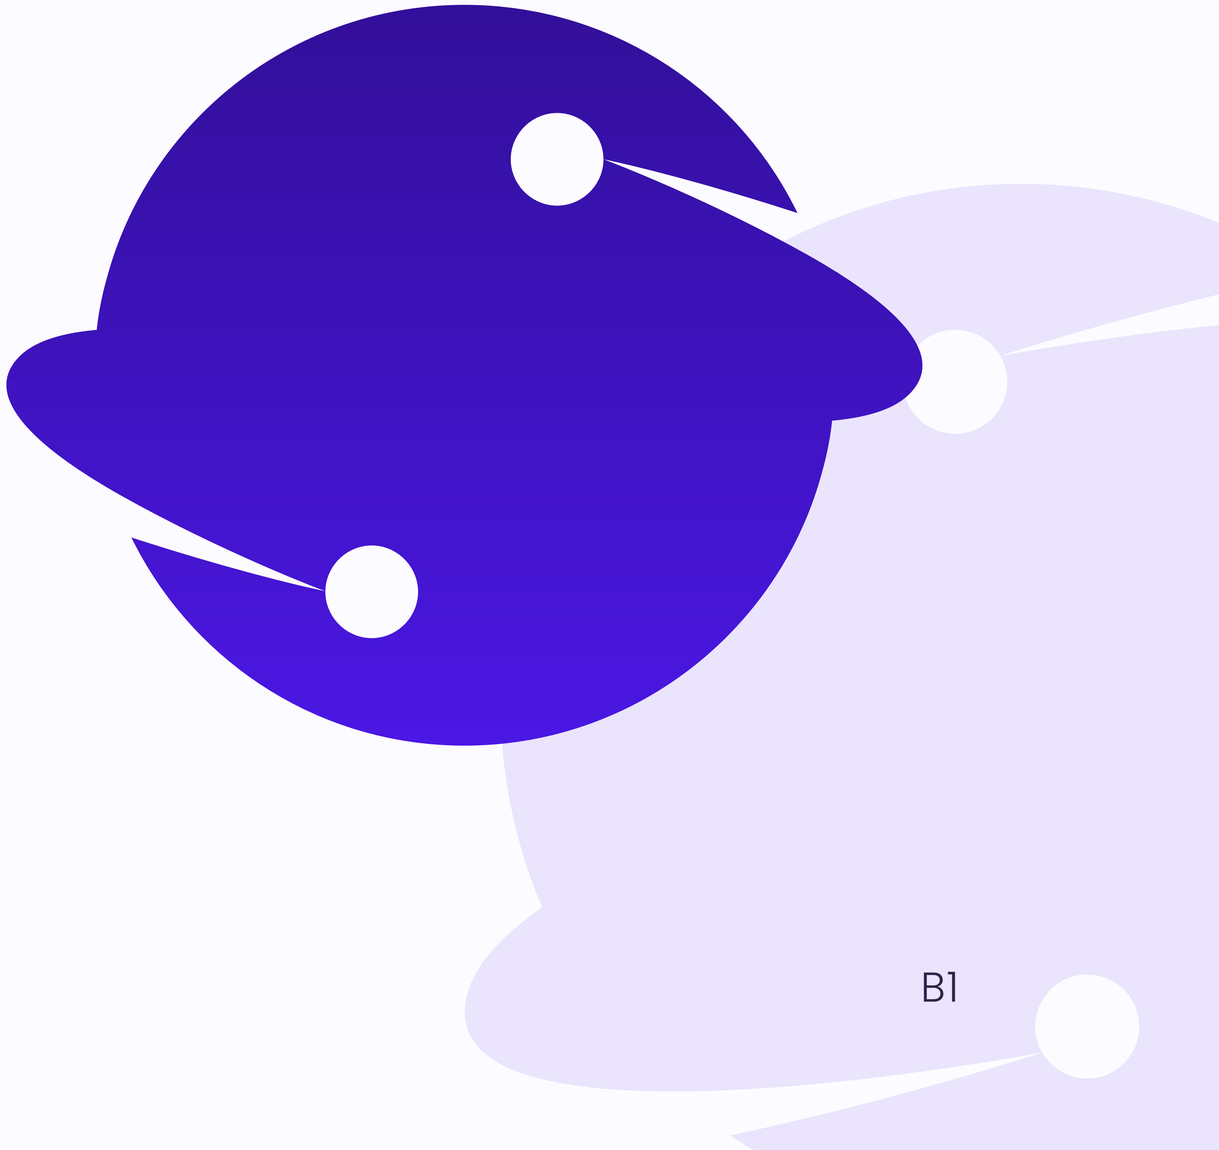

SHAPES & PATTERNS

PLANETOID

The main MOI shape is the planetoid which gets used across our brand communication to subtly reference the MOI brand when other identifiers such as logos may not be necessary.

The planetoid shape is ideally used with MOI brand colours but may be used with other fill colours, strokes or even as masks for background elements such as images or patterns.

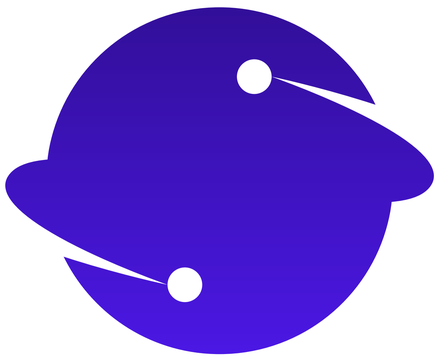

The planetoid shape should be used consistently across all brand materials, such as website, social media, print materials, and other marketing collateral.

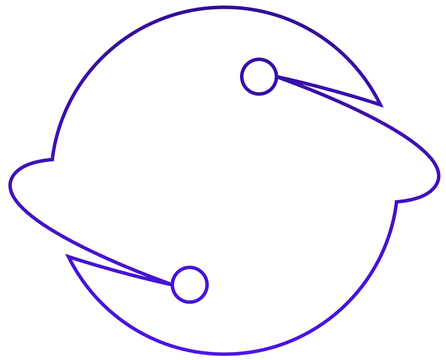

USAGE

1. As a solid watermark on a background.
2. As a mask for other media in background.
3. As an outline on background.

C

COLOURS

BRAND COLOURS

1. The MOI brand represents itself visually by contrasting white against purple. Please use these colours exactly as prescribed to evoke the brand ethos.
2. Both purple and white have a darker shade that is used to create gradients in the logo, on backgrounds etc.
3. For all digital presentations, please use colours specified under Screen Colours.
4. For print purposes, MOI Main does not translate directly to paper because such a pigment does not exist in real life. Use the CMYK settings or the alternative hex swatch.

MOI Main

BRAND GRADIENTS

We often use gradients in our visual language on backgrounds and within larger graphic elements in compositions to simulate natural lighting-like effects.

There is no prescribed direction for the gradient effect. However, as a thumb-rule, remember that humans tend to follow gradients from dark to light. Consider using the axis of the gradient to nudge eye-movement in the direction you want their eyes to move.

BACKGROUNDS LIGHT

1. We use both dark and light colours as backgrounds in material for MOI communications. There are four kinds of light backgrounds and only one dark background.
2. If it is necessary to create layers in visually dark material, please use boxes of white set to opacities between 3-15%.

TYPOGRAPHY LIGHT

1. Use "Accent" for headings and other high-visibility text.
2. Use "High Emphasis" for text that needs to stand out and grab attention.
3. Use "Medium Emphasis" for text that needs to be slightly more prominent than body copy but not as attention-grabbing as high emphasis.
4. Use "Low Emphasis" for text that needs to be de-emphasized or used as supplementary information.
5. Use "Disabled" for text in elements that needs to be in inactive or disabled state.

D

TYPOGRAPHY

FONT FAMILY
POPPINS

1. The MOI brand uses Poppins exclusively
2. Please install the latest version of Poppins from Google:

   Poppins (Google Fonts)
3. We recommend only use the following weights: Regular, Medium, Semi Bold and Bold. Do not use Thin, Extra light, Light, Extra Bold, Black font weights.

Poppins

ABCDEFGHIJKLMNOPQRS

TUVWXYZ1234567890

abcdefghijklmnopqrstu

vwxyz1234567890

~~Thin~~	~~My Own Internet~~
~~Extra Light~~	~~My Own Internet~~
~~Light~~	~~My Own Internet~~
Regular	My Own Internet
Medium	My Own Internet
Semi Bold	**My Own Internet**
Bold	**My Own Internet**
~~**Extra Bold**~~	~~**My Own Internet**~~
~~**Black**~~	~~**My Own Internet**~~

TYPEFACES BY USE CASE

1. Headings use Bold fonts only.
2. Subheading may use Semibold variations.
3. Body is always set to medium.
4. Other weights such as regular may be used if necessary but avoid using weights lesser than ‘Light’ on small screens.

Bold	**This Is For Headings**
Semi Bold	**This Is For Subheadings**
Medium	This is default body text

This is body text with an

emphasis(bold weight) word

TYPE SETTINGS

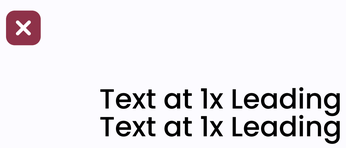

1. Do not change letter-spacing/tracking for any text except Over-line text
2. Line spacing (or Leading) is set between 1.1x and 1.3x (Most common setting: 1.25x) for all titles and headings.
3. Line spacing (or Leading) is set between 1.5x and 1.75x (Most common setting: 1.5x) for body copy. Smaller text may be set to 1.75x line-spacing to increase legibility.
4. Consider using 1.25x paragraph spacing at minimum when writing long documents.
5. Try keeping the number of characters in a single line between 50-75 characters.
6. Wrap text in smaller text boxes when the number of words per line is highly mismatched over 2-3 lines. Avoid orphans and widows in text.

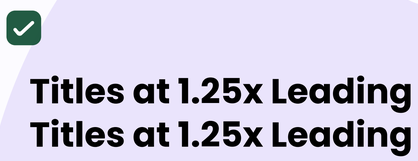

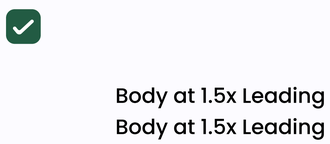

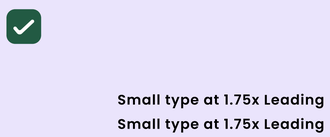

TYPE SCALES

1. All typography is generated from a type scale rhythm that is equivalent to a pythagorean musical ratio.
2. In order to figure font sizes, consider multiplying the base font size repeatedly with a ratio such as 1.333, 1.414, 1.5 or 2 to get subsequent font sizes. Do this repeatedly until you get to the largest font size for title headings.
